

# Pool Information

*Dolphin*

Fiberglass Pools are the cost effective, environmentally friendly pool choice, great for your family and the environment.

Dolphin fiberglass pools high tensile strength allows the pool to flex without cracking making it ideal for regions with extreme temperature changes.

Dolphin's gel coat finish makes it the easiest pool to maintain as the surface is chemically inert therefore it does not alter the pools water chemistry, which means you do not need to use as many chemicals to keep your water balanced.

The smooth seamless gel coat surface not only feels great but also does not allow for algae to bond to the pool, you can just sweep it away. Making a fiberglass pool the best choice for busy families. Instead of maintaining your pool, you will be enjoying it.

Using less chemicals to maintain your water chemistry and never needing to replace a liner makes a fiberglass pool the environmentally smart choice.

## Colour Samples

Sahara

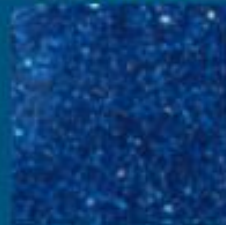

Dolphin White

Caribbean Blue

Pacific Blue

Slate (NEW)

Midnight (NEW)

See the Comparison Chart for further information.

## Feature

### Fiberglass

### Vinyl Liner

### Cement

#### DURABILITY

High tensile strength allows for pool to flex without cracking, ideal for regions with extreme temperature change; pet proof

Rips, tears a concern; liner subject to chemical damage

Cracks from extreme weather changes, subject to chemical change

#### CHEMICAL USAGE

Far fewer chemicals needed since the gel coat surface does not affect water chemistry; algae does not adhere to gel coat surface

3-4 times more chemical usage than fibreglass

Require substantially more chemicals to keep water balanced

#### SURFACE

Gel Coat Surface is smooth & algae cannot bond as easily; pet proof; longest lasting surface available

Algae nests in seams & in texture of textured liner; pets can tear liner; unsightly when faded; liner can pull out at edges

Algae can nest in pores; pet proof; cracks, stains & erodes

#### INSTALL TIME

3-4 Days

2-3 Weeks

4-8 Weeks

#### REPAIRS/REPLACING/RESURFACING COSTS

No repairs, or resurfacing needed

High probability of repairs needed for rips & tears; liner replacement costly, liner goes to landfill when its replaced

Resurfacing repair issues are probable & costly.
